

Koundinya Pidaparthi

Full Stack Software Engineer

koundinyapidaparthi@gmail.com | 551-229-8660 | New York, NY | [linkedin.com/in/koundinyap/](https://www.linkedin.com/in/koundinyap/) | github.com/koundinyapidaparthi2

SUMMARY

Full Stack Software Engineer with 3+ years of experience building scalable web applications. Proficient in React, Next.js, Node.js, TypeScript, and cloud platforms (AWS, GCP). Passionate about crafting performant, user-first products and integrating AI-powered features.

SKILLS

Languages	JavaScript (ES2022+), TypeScript, Python, Java, HTML5, CSS3, SQL, GraphQL
Frontend	React, Next.js, React Native, Redux, Zustand, Framer Motion, Tailwind CSS, Material UI, shadcn/ui, Storybook, Webpack, Vite
Backend	Node.js, Express.js, GraphQL (Apollo Server), REST APIs, WebSockets, NextAuth.js, Prisma, Redis
Databases	MongoDB, PostgreSQL, DynamoDB, MySQL, Firebase Firestore, BigTable, Redis
Cloud & DevOps	AWS (EC2, Lambda, S3, DynamoDB, CDK, API Gateway, ECS, IAM), GCP (GCS, BigTable, Cloud Build, Cloud Run), GitHub Actions, Docker, Terraform, Vercel, Netlify, CI/CD Pipelines
Testing	Jest, React Testing Library, Cypress, Vitest, Playwright
Tools & Practices	Git / GitHub, Jira, Figma, Postman, LaunchDarkly, Stripe, Agile / Scrum, Code Review, System Design

EXPERIENCE

Anchor Operating System

June 2025 – Present

Software Engineer — New York, NY (Remote)

- Architected and shipped core modules of an AI-first operating system layer using Next.js 14 App Router, TypeScript, and React Server Components, reducing time-to-interactive by 38%.
- Designed and implemented a real-time collaboration engine using WebSockets and Redis pub/sub, enabling sub-100ms latency for multi-user document editing across distributed sessions.
- Built a plugin/extension marketplace infrastructure supporting dynamic module loading via Module Federation, cutting third-party integration time from weeks to days.
- Established CI/CD pipelines with GitHub Actions and AWS CDK, automating deployments to ECS Fargate with zero-downtime blue/green releases.
- Led the migration of a monolithic REST API to a GraphQL federation layer (Apollo Router + subgraphs), improving query performance by 45% and eliminating N+1 issues.
- Mentored two junior engineers through weekly 1:1s, code review culture, and pair programming sessions, accelerating their onboarding by 30%.

Next.js 14, TypeScript, React Server Components, WebSockets, Redis, GraphQL, Apollo, AWS CDK, ECS Fargate, GitHub Actions

Anchor Operating System

May 2024 – Sep 2024

Software Engineer Intern — New York, NY (Remote)

- Contributed to the early-stage product by building the core dashboard UI using React, Zustand, and Tailwind CSS, establishing the design-system foundation adopted by the full team.
- Implemented OAuth 2.0 authentication flow with NextAuth.js supporting Google and GitHub providers, reducing login friction and improving conversion by 22%.
- Developed RESTful API endpoints in Node.js/Express integrated with MongoDB Atlas, powering the user preferences and settings modules.
-

Wrote unit and integration tests with Jest and React Testing Library, achieving 82% code coverage on critical user-flow components.

- Collaborated with the design team to translate Figma prototypes into pixel-perfect, accessible (WCAG 2.1 AA) React components using Framer Motion for micro-interactions.

React, Zustand, Tailwind CSS, NextAuth.js, Node.js, Express, MongoDB Atlas, Jest, Framer Motion

Hornblower Group

Aug 2022 – Jul 2023

Software Developer — New York, NY

- Built and maintained customer-facing ticketing and event management features using React, Redux, and GraphQL, serving over 2 million annual users across ferry and dining experience platforms.
- Optimized SQL and MongoDB query patterns, reducing average API response time from 850ms to 210ms for the high-traffic booking service.
- Integrated Stripe payment gateway with idempotent transaction handling, processing \$5M+ in monthly bookings with a 99.98% success rate.
- Developed a seat-selection microservice in Node.js/TypeScript backed by DynamoDB with DynamoDB Streams for real-time availability updates.
- Implemented feature flags with LaunchDarkly enabling gradual rollouts to 5% ' 100% of users, reducing production incidents by 60%.
- Participated in on-call rotation, triaging and resolving P1/P2 incidents for the ticketing platform with an average MTTR of under 25 minutes.

React, Redux, GraphQL, Node.js, TypeScript, MongoDB, DynamoDB, Stripe, LaunchDarkly, AWS Lambda

Syscloud Technologies

June 2021 – June 2022

Frontend Software Engineer Intern — Hyderabad, India

- Developed responsive SaaS dashboard components in React and Material UI for Google Workspace backup and recovery products, improving user task completion rate by 18%.
- Built reusable component library with Storybook documentation, standardizing UI patterns across 4 product teams and reducing duplicate code by 35%.
- Integrated Google Drive and Gmail APIs to display backup status, quota usage, and restore progress with real-time polling using React Query.
- Implemented lazy loading, code splitting, and image optimization strategies, cutting initial bundle size from 1.8MB to 620KB and improving Lighthouse score from 54 to 89.
- Collaborated in an Agile/Scrum environment with two-week sprints, participating in daily standups, sprint planning, and retrospectives.

React, Material UI, Storybook, React Query, Google Workspace APIs, JavaScript, CSS3, Webpack

PROJECTS

AplifyAI

Jan 2025 – May 2025

Next.js 14, TypeScript, OpenAI GPT-4, LangChain, Pinecone, Supabase, Tailwind CSS, Stripe

- Built a Retrieval-Augmented Generation (RAG) pipeline using LangChain and Pinecone vector database to semantically match resume sections to job descriptions, improving relevance scores by 60%.
- Integrated OpenAI GPT-4 API to generate context-aware, ATS-optimized resume bullets and cover letters in under 8 seconds per request.
- Designed a multi-tenant SaaS architecture on Supabase (PostgreSQL + Row Level Security) with Stripe billing supporting Free, Pro, and Enterprise tiers.

Harmony AI

Aug 2024 – Dec 2024

React, Node.js, Express, OpenAI Whisper, GPT-4, MongoDB, AWS S3, Socket.io

•

Built a real-time audio transcription pipeline using OpenAI Whisper API, processing audio streams in 200ms chunks to deliver sub-second transcription latency.

- Developed an LLM-based music feedback engine with GPT-4 that analyzes tempo, melody, and lyrics from transcribed sessions, providing structured coaching suggestions.
- Implemented WebSocket rooms via Socket.io enabling live collaboration between multiple musicians, with cursor presence, synchronized playback, and conflict-free edits.

AI Exam Prep Platform

Mar 2024 – Jul 2024

Next.js, TypeScript, OpenAI GPT-4, Prisma, PostgreSQL, Tailwind CSS, React Query, Vercel

- Developed an adaptive question-generation engine powered by GPT-4 that dynamically adjusts difficulty based on a student's historical performance using a spaced-repetition algorithm (SM-2).
- Built a natural-language answer evaluation system that compares free-text student responses to model answers and returns a structured rubric score with GPT-4.
- Designed the database schema with Prisma and PostgreSQL supporting multi-subject topic trees, question banks, and per-user attempt history with efficient indexing.

EDUCATION

Pace University

May 2025

Master of Science in Computer Science — GPA: 3.95 — New York, NY

- Dean's List — every semester
- Graduate Teaching Assistant — Data Structures & Algorithms

Jawaharlal Nehru Technological University

May 2021

Bachelor of Technology in Computer Science & Engineering — Hyderabad, India
